

Torq/Lite® Hydraulic Wrenches

Another Innovation Available from ACI

Torq/Lite® Hydraulic Wrenches provide a safe, accurate method of tightening large jam nuts on compressor piston rods as well as for use in other applications.

Eliminate hammer wrenching, hydraulic jacks, cranes and other unsafe and inaccurate equipment used for tightening large threaded nuts in hard to reach places. **Torq/Lite® Hydraulic Wrenches** are available with torque capacities ranging from 100 to 32,000 ft-lb. Standard features include:

- ▶ Patented* "Split-Head" design can be customized to fit any size OEM jam nut, hex or other configuration. Bi-directional pivots allow the Split-Head to open two ways to better accommodate your need for fast, safe loosening and tightening.
- ▶ The Reaction Pad reacts against the crosshead guide opening or another stable area.
- ▶ Lightweight, ergonomic design with electroless nickel (EN) coated parts to resist corrosion.
- ▶ Patented* 360° swivel stainless steel fittings allow hose movement without binding.
- ▶ Calibrated to provide $\pm 3\%$ torque accuracy.

- ▶ Standard Turbo Air Hydraulic Pump converts 40 to 150 psi air source into as much as 10,000 psi of hydraulic pressure. Exact torque can be preset in minutes and accurately and consistently repeated. A button pendant provides easy advance/extend and retract/return.
